## Bug Fixes:

---

- **MapWidget may crash when using MapBox as the map provider:** Fixed. A crash may occur when MapBox is used as the map provider and the user exits the Activity that holds the map.
- **`DJIPolyline` `getOptions` method returns null:** Fixed. The method has been removed since it was not used.
- **Secondary video feed initialization issues:** Fixed.
- **Travel mode button is enabled when no product is connected:** Fixed.
- **"Image Transmission Signal Weak" warning shows on Mavic Mini:** Fixed.

# Known Issues

---

- **Text sometimes does not resize correctly:** When widgets are placed inside a fragment and the fragment size changes, text size sometimes is not resized correctly.
- **Vision Widget and Radar Widget do not support Matrice 300 RTK, Mavic Mini, and Mavic Air 2:** These features will be supported in Android UX SDK 5 Beta.
- **[OLD]Mobile SDK 4.7 and later versions are incompatible with x86 devices:** Since v4.7, Mobile SDK has included FFMpeg lib to provide the transcoded video feed, but FFMpeg x86 so files will lead to the runtime crash when the target API of APP is larger than 23(included).
- **[OLD]Inability to customize video and photo button behavior on Mavic 2 series RC:** The Mavic 2 series aircraft allows developers to customize the behavior of the photo and video buttons on the RC. The UX SDK does not currently give these buttons a default behavior. Using the buttons to take a picture or video using the RC while connected to UX SDK will not work by default. The developer must assign a behavior for them to work.
- **[OLD]FPVOverlay only works with primary camera:** FPVOverlay will always work only with the primary camera on dual camera aircraft even when overlaid on the secondary camera view.
- **[OLD]Self-unlocking of fly zones may not work on HERE maps:** Self-unlocking fly zones on HERE maps may not work as expected.

## Bug Fixes:

---

- **CameraCaptureWidget stops recording video when it is removed from the parent view:** Fixed.

## Known Issues

---

- **Incompatibility of Mobile SDK since 4.7 with x86 devices:** On x86 devices that run Android API 23 or above, if the application is targeted with API 23 or above, FFmpeg lib might lead to runtime crashes or warnings.
- **Inability to customize video and photo button behavior on Mavic 2 series RC:** The Mavic 2 series aircraft allows developers to customize the behavior of the photo and video buttons on the RC. The UX SDK does not currently give these buttons a default behavior. Using the buttons to take a picture or video using the RC while connected to UX SDK will not work by default. The developer must assign a behavior for them to work.
- **FPVOverlay only works with primary camera:** FPVOverlay will always work only with the primary camera on dual camera aircraft even when overlaid on the secondary camera view.
- **Self-unlocking of fly zones may not work on HERE maps:** Self-unlocking fly zones

on HERE maps may not work as expected.

- **FPVWidget may not resize correctly:** When switching between different resolutions, the video feed may look stretched.

## Bug Fixes

---

## Known Issues

---

- **Incompatibility of Mobile SDK 4.8 with x86 devices:** On x86 devices that run Android API 23 or above, if the application is targeted with API 23 or above, FFmpeg lib might lead to runtime crashes or warnings.
- **Inability to customize video and photo button behavior on Mavic 2 series RC:** Mavic 2 series aircraft allow developers to customize the behavior of photo and video buttons on the RC. Because the UX SDK does not currently give these buttons a default behavior, the user needs to assign behaviors to them before using.
- **FPVOverlay only works with primary camera:** FPVOverlay will always work only with the primary camera on dual camera aircrafts even when overlaid on the secondary camera view.

# Android UX SDK 4.7.1 Release Notes

## Release Date

---

2018.09.04

## Highlights

---

- Support for Android Mobile SDK v4.7.1

## Other Changes

---

# Android UI Library 4.4 Release Notes

## Release Date

---

2017.12.22

## Highlights

---

- Histogram
- Gimbal control through FPV long press
- Collision detection widgets
- Optional grid mode as FPV overlay
- Bug fixes
- **SDK Integration:** Some of SDK classes now need to be loaded before using. Loading process is done by `Helper.install()`. Developer needs to call this method before using any SDK functionality. Failing to do so will result in unexpected crashes. UILib sample has add this to reflect the new requirement. Please refer to the sample app for more detail.
